

integrated crisis management **FRAMEWORK**

HARD **TALK**

The Context

A crisis is no longer defined by what happens, but by how it is PERCEIVED.

John Keells Holdings operates across multiple high-visibility sectors which creates constant exposure across industries, each with its own risk profile.

The Modern Crisis Environment is constantly evolving.

- First narrative $\neq$ accurate but often sticks.
- Perception forms before facts emerge
- Platforms reward Emotion, Controversy and Uncertainty.
- Visibility is driven by engagement not importance
- Anyone can trigger or shape a crisis.
- If you don't define the narrative, others will
- Crises are permanent digital memory
- Reputation is shared. Risk is not.
- Crises hit all fronts at once: Customers $\rightarrow$ emotional | Investors $\rightarrow$ financial | Regulators $\rightarrow$ structural | Media $\rightarrow$ narrative

**Visibility is no longer proportional to importance.
it is proportional to ENGAGEMENT.**

Core Strategic Principle

“Crisis management is not transactional. It is relational.” - Tony Jaques

Stakeholder Reaction is Pre-Conditioned

Audiences respond based on Prior experience and Brand trust

Reputation is Pre-Loaded Trust

A strong reputation absorbs impact and buys time vs a weak reputation accelerates which accelerates backlash and amplifies scrutiny.

Crisis Outcomes Are Pre-Determined

The trajectory of a crisis is shaped before it begins by how the organisation is already perceived.

strategic shift

To operate beyond “responding better”, it should be about **being trusted before the response begins.**

The Structural Reality

Shared reputation across SBU's

Risk Flow	Drivers	Impact
Group to SBU	• Governance or leadership issues • Regulatory or political exposure • Strategic or financial concerns	• Reputational spillover across subsidiaries • Increased scrutiny on individual businesses • Erosion of trust across brands
SBU to Group	• Operational failures (e.g., banking, logistics, leisure) • Safety or compliance issues • Industry-specific crises	• Elevation to Group-level reputation risk • Cross-sector narrative contamination • Investor and stakeholder concern at holding level

TWO DIRECTIONAL RISK FLOW ————— THE NEED —————> TWO FRAMEWORKS

Preparedness and Response

Each Framework has three modes.

MEASUREMENT & KPI SETTING		
Agency	Corp Comms	
- Media & Narrative Mapping - Share of Voice & Media Quality Analysis - Crisis Response Measurement - KPI Setting	- Trust & perception studies - Investor & customer data - Internal response metrics	
Proactive - Reputation Building - Consistent, values-led communication - Visibility of leadership and governance - Positive narrative development across sectors - Risk Identification - Early signal detection - Industry-specific risk mapping across subsidiaries - Scenario Planning - Pre-defined crisis scenarios by business unit - Clear escalation pathways (Subsidiary → Group) - Stakeholder Mapping	Reactive - Response Strategy - Align with level of responsibility - Centralized guidance from Group where required - Narrative Contro - Define the first credible version of the story - Ensure consistency across subsidiaries - Media Engagement - Timely, transparent communication - Spokesperson alignment and discipline - Recovery Positioning - Shift from incident → response → resolution - Reinforce credibility and corrective action	Real-Time Measurement & KPIs - Sentiment shift during crisis lifecycle - Volume and tone of media coverage - Speed of response vs narrative spread - Stakeholder reaction (investor movement, customer sentiment) KPIs to Steady the Needle - Time taken to stabilize negative sentiment - Reduction in misinformation spread - Consistency of messaging across entities - Restoration of baseline trust levels

INTEGRATED CRISIS MANAGEMENT SYSTEM

The framework is built by integrating globally accepted models, each assigned a specific functional role within the system.

READINESS

REPUTATION BASELINE & KPI DEFINITION

REPUTATION BASELINE

STEADY STATE KPIs

- Media Sentiment
- Social Sentiment
- Share of Voice
- Media Quality
- Trust Perception

KPI	What It Measures	Why It Matters
Positive / Neutral Sentiment %	Overall tone of media and public discussion	Shows reputation strength and vulnerability
Negative Sentiment %	Level of criticism or concern	Helps identify early warning signals
Share of Voice	JKH visibility compared to competitors	Shows whether JKH leads the conversation
Quality-Weighted Media Score	Tone, prominence, publication credibility, message pull-through	Measures value of coverage, not just volume
Message Pull-Through	Whether JKH’s key messages are appearing in coverage	Shows if communication is landing
Trust Score	Stakeholder confidence in JKH	Tracks deeper reputation strength
Stakeholder Confidence Index	Investor, customer, employee, regulator confidence	Helps identify audience-specific risk
Issue Frequency	Number of recurring negative themes	Identifies slow-building reputational risks

READINESS

REPUTATION BASELINE & KPI DEFINITION

CRISIS KPIs

KPI	What It Measures	Suggested Target / Use
Time to Detect	Time from first signal to internal alert	As close to real-time as possible
Time to Classify	Time taken to determine Level 1, 2, or 3	Within 30–60 minutes
Time to First Response	Time taken to issue holding statement or acknowledgement	Within 60–90 minutes
Negative Sentiment Spike	Increase in negative mentions compared to baseline	Used as escalation trigger
Narrative Velocity	Speed at which the issue spreads	Shows whether crisis is accelerating
Misinformation Volume	Number of inaccurate claims gaining traction	Guides correction strategy
Message Consistency	Alignment across Group, subsidiary, media, and social channels	Prevents confusion
Stakeholder Reaction	Investor, regulator, customer, employee response	Shows real-world impact
Time to Stabilise	Time taken for negative sentiment and media volume to slow	Measures control
Recovery to Baseline	Time taken to return to pre-crisis reputation levels	Measures reputational recovery

READINESS

CRISIS CLASSIFICATION & THRESHOLD SETTING

THRESHOLDS FOR ACTION

LEVEL 1 ISSUE	LEVEL 2 RISK	LEVEL 3 CRISIS
Characteristics: • Operational or service-related • Limited audience exposure • No narrative forming Ownership: • Subsidiary Operations + Communications Examples: • Isolated customer complaint • Minor service disruption • Small social media mention	Characteristics: • Issue gaining visibility • Narrative beginning to form • Potential to escalate if unmanaged Ownership: • Subsidiary CMT Examples: • Multiple complaints trending • Media pickup (non-Tier 1) • Social traction building	Characteristics: • Public narrative established • High stakeholder sensitivity • Potential Group-level impact Ownership: • GCMT + Crisis Command Centre Examples: • National media coverage • Safety incident • Regulatory involvement • Viral backlash

EXAMPLE.

READINESS

TRIGGER INDICATORS

SENTIMENT	MEDIA	VELOCITY	STAKEHOLDER	STRUCTURAL
• % increase in negative mentions vs baseline • Tone of conversation (mild vs aggressive)	• Type of media coverage • Placement and prominence	• Rate of mentions per hour • Growth curve (flat vs exponential)	Regulatory • Inquiry or notice • Request for explanation Investor • Analyst questions • Market reaction • IR team escalation Customer • Sudden spike in complaints • Service disruption feedback	Mention of: • JKH Group (not just subsidiary) • Leadership / governance Cross-subsidiary narrative: • “This reflects JKH standards” • “This is a broader issue”
Thresholds • +10–15% increase → Monitor (Issue) • +15–30% increase → Risk • >30–40% spike → Crisis	Thresholds • No media → Issue • Online / sector media → Risk • Tier 1 / national media → Crisis	Thresholds • Flat / slow growth → Issue • Sustained growth over 1–2 hours → Risk • Rapid spike / trending → Crisis	Threshold Logic • No stakeholder involvement → Issue • One stakeholder group reacting → Risk • Multiple high-impact stakeholders → Crisis	Threshold Logic • Isolated to one SBU → Issue / Risk • Spilling into Group narrative → Crisis
Additional considerations • Complaints vs outrage • Concern vs anger	Additional considerations • Headline vs mention • Tone of coverage • Whether JKH is the focus or incidental	Additional considerations • Hashtag trending • Influencer amplification • Cross-platform spread		

READINESS

CLASSIFICATION DECISION LOGIC

- Classification is based on:
- Combination of triggers & not a single metric
 - Weighted judgement:
 - Severity
 - Speed
 - Visibility
 - Stakeholder impact

Scenario	Classification
High complaints, no media	Risk
Low complaints, Tier 1 media	Crisis
Moderate sentiment, viral spread	Crisis

EXAMPLE

READINESS

STAKEHOLDER MAPPING & PRIORITISATION

STAKEHOLDER MAPPING

Map out impacted groups of stakeholders at a group level and at SBU level.

SCENARIO MAPPING

Develop Core scenarios across sectors

For Each Sector Define

- Likely narrative
- Risk level
- Escalation path
- Initial response direction

STAKEHOLDER PRIORITISATION

In a crisis, the order of communication can determine the outcome

Ensure communication is:

- Sequenced strategically
- Aligned to risk
- Focused on impact and not visibility

PRIORITISATION LOGIC

- 1.IMPACT
- 2.INFLUENCE
- 3.SENSITIVITY

GENERAL ORDER

- 1.Customers
- 2.Regulators
- 3.Investors
- 4.Media
- 5.Employees

READINESS

MESSAGE AND NARRATIVE ARCHITECTURE

OBJECTIVE

- Responds immediately and consistently
- Controls how the crisis is interpreted
- Aligns facts with meaning

CORE PRINCIPLE: NARRATIVE INTELLIGENCE

Every crisis has two layers:

- Event → What actually happened
- Narrative → What people believe it means

Our approach should Anticipate interpretation and shape:

- Emotion
- perception
- meaning

To do this we have map narratives, narrative trajectory (emergence, amplification, polarisation, stabilisation, resolution)

TO IDENTIFY AND DEFINE

1. Narrative Structure
2. Message Architecture system
 - a. Holding Statement Structure
 - b. Apology Frameworks
 - c. Clarification Frameworks
 - d. Update Statement Structures
3. Responsibility language matrix
 - a. Low Responsibility
 - i. Clarify
 - ii. Contextualise
 - iii. Reinforce track record
 - b. Medium Responsibility
 - i. Acknowledge
 - ii. Show corrective action
 - c. High Responsibility
 - i. Accept
 - ii. Apologise
 - iii.
4. Scenario Based Message preparation

CRISIS GOVERNANCE & CONTROL

DUAL LEVEL CRISIS GOVERNANCE

Subsidiary Crisis Management Teams (CMTs)

- First line of detection and response
- Responsible for:
 - SBU Issue identification
 - SBU Initial containment
 - SBU Local communication

Group Crisis Management Team (GCMT)

- Responsible for:
 - Group Issue identification
 - Group initial containment
 - Group local communication
- Central authority for:
 - Strategic control
 - Reputation protection
 - Cross-subsidiary alignment

CRISIS GOVERNANCE & CONTROL

CRISIS COMMAND CENTRE

A centralised hub to:

- Aggregate fact, narrative, and stakeholder intelligence
- Enable real-time decision-making under pressure
- Ensure single-source control of communication

RESPONSIBILITIES

- Information validation (fact vs noise)
- Message approval and consistency
- Stakeholder engagement sequencing
- Media and narrative management
- Escalation and decision thresholds

TO IDENTIFY AND DEFINE

1. Who sits in CCC
2. Where it operates (physical/virtual)
3. Communication channels (WhatsApp groups, dashboards, etc.)
4. Data sources feeding into CCC
5. Media monitoring
6. Social listening
7. Sentiment tracking
8. Real-time alert systems

TRAINING & SIMULATION

- Media training for spokespeople
- Crisis simulations (by scenario)
- War-gaming sessions

CRISIS GOVERNANCE & CONTROL

DECISION RIGHTS & APPROVAL MATRIX

OBJECTIVE

- Decisions are made quickly
- Authority is clear
- Communication is not delayed by hierarchy
- Subsidiaries (SBUs) → Handle operational response and initial communication
- Group (GCMT) → Controls narrative, reputation, and escalation

TO IDENTIFY AND DEFINE

1. Decision Rights Framework
 - a. SBU Decision Authority
 - b. GCMT Decision Authority
 - c. Decision Matrix
2. Legal vs Communication rules
3. Approval Time framework
4. Escalation Decision Flow

CRISIS LIFECYCLE

NEXT STEPS

1. Leadership & SBU Alignment
2. Current State Audit
3. Define Crisis Thresholds & Classification
4. Build Governance Structure (CMT + GCMT)
5. Design Crisis Command Centre (CCC)
6. Scenario Library
 - a. Pre-defined crisis scenarios by sector:
 - b. Likely narrative
 - c. Risk classification
 - d. Response approach
7. Message Frameworks and Architecture
8. Spokesperson Frameworks
9. Define Decision Rights & Approval Matrix
10. Monitoring & Reporting System
11. Develop AI System
12. Training & Simulation
